(*) = Very Important

What if the Universe Is NOT Expanding? (Douglas Giles)

" Philosopher Thomas Kuhn argued that science is "a series of peaceful interludes punctuated by intellectually violent revolutions" in which "one conceptual world view is replaced by another." (*The Structure of Scientific Revolutions*, 1962) The longer-lasting, more tranquil periods of "normal science" are guided by a dominant paradigm. Astrophysics has been in such a peaceful interlude for decades with its belief that the universe is expanding. The expanding universe theory is a paradigm that guides how astrophysicists' thinking about the universe."

<https://insertphilosophyhere.com/what-if-the-universe-is-not-expanding/>

Summary of the "Decreasing Universe Theory"

The Decreasing Universe theory (D.U.T.) proposes that the gravitational field continuously contracts space and everything within it — rulers, atoms, and clocks alike. This single effect provides an alternative explanation for two of the central puzzles of modern cosmology:

- The apparent accelerated expansion of the universe, without requiring dark energy.
- The anomalous orbital velocities of stars in galaxies, without invoking dark matter.

"(July/2026)

https://jocaxx.github.io/DUniverse/Todos/DUT_Summary.pdf

Decreasing Universe Theory: Galaxies without Dark Matter (NGC 1052-DF2, DF4, and DF9)

"In the DUT (Decreasing Universe Theory) model, "Dark Matter" is explained as an effect of the differential contraction of stars relative to their distance from the massive

core of the galaxy. We will see that there may exist galaxies in which this effect is very small, whose causes corroborate the evidence of this model. "(July/2026)

<https://philpapers.org/archive/BARDUT-4.pdf>

https://jocaxx.github.io/DUniverse/Todos/DUT_NGC1052_ENG.pdf

(*)Observational Evidence of Intrinsic Differential Redshifts in Galaxy Pairs: A Test of the Decreasing Universe Theory (DUT)

“In this work, we analyze a highly controlled sample of $n = 700$ galaxy pairs in dense environments (including the Virgo, Fornax, and Hydra clusters). The data reveal a persistent systematic asymmetry, where the massive primary component exhibits a lower redshift than predicted in 56.28% of the cases. The statistical hypothesis test rejects random symmetry with a Z-score of 3.33 and a p-value of 0.00043 (**99.957% confidence level**).” (Jun/2026)

https://jocaxx.github.io/DUniverse/Todos/DUT_GAL_Eng.pdf

(*)Decreasing Universe Theory: Cosmological Time Dilation and the SN1A Explosion

“We will show that, within the “Decreasing Universe Theory” (DUT), time inside a gravitational field is altered in the same way as spatial distance measurement scales. At the cosmic level (timescales of millions of years), this effect becomes perceptible and explains the variation in the measured duration of Type Ia Supernova (SN1A) explosions.”(May/2026)

DUT FAQ: Frequently Asked Questions about the "Decreasing Universe Theory"

“This document presents the fundamentals of the Decreasing Universe Theory (DUT), proposing that the origin of everything lies in the concept of "Jocaxian Nothingness" rather than the traditional Big Bang. The central premise suggests that gravity causes a continuous contraction of matter and physical systems, challenging the perception of an accelerated expansion of the cosmos. Unlike other models, the DUT envisions space as an unchanging vacuum where only material elements decrease in scale over time.

The text argues that this new perspective requires a revision of General Relativity, while remaining compatible with the principles of Quantum Mechanics. Finally, the author clarifies frequently asked questions to establish the DUT as an alternative and comprehensive theoretical framework for modern cosmology. "(JUN/2026)

https://jocaxx.github.io/DUniverse/Todos/FAQ_DUT_ENG.pdf

Decreasing Universe Theory: The Tully-Fisher Relation

"Starting from the 'Decreasing Universe Theory' (DUT), particularly from the formula that explains the dark matter illusion, we will derive the Tully-Fisher relation for spiral galaxies." (May/2026)

https://jocaxx.github.io/DUniverse/Todos/TullyF_Eng.pdf

Analysis of Mass-Redshift Correlation in Velocity-Matched Subgroups: A Rigorous Test for the Decreasing Universe Theory

"The Decreasing Universe (D.U.) theory proposes that the gravitational field induces a continuous spatial contraction, predicting that more massive galaxies should exhibit a smaller redshift at the same distance [1]. The main obstacle to testing this prediction is the noise introduced by the galaxies' peculiar velocities. This study applies a rigorous methodology to isolate the effect of mass by analyzing the correlation between stellar mass and redshift in galaxy subgroups with controlled distance, age, and radial velocity. The results show that, by minimizing dynamical noise, the negative correlation predicted by the D.U. theory emerges in specific subsamples, suggesting that the intrinsic gravitational effect may be detectable" (Apr/2026)

<https://oaskpublishers.com/assets/article-pdf/analysis-of-mass-redshift-correlation-in-velocity-matched-subgroups-a-rigorous-test-for-the-decreasing-universe-theory.pdf>

The Age of Galaxies as a Determining Factor for Redshift: An Analysis from the Perspective of the Decreasing Universe Theory

"The Decreasing Universe (D.U.) theory proposes that the gravitational field induces a continuous contraction of space, offering an alternative explanation for cosmological redshift. A crucial and logical deduction from this theory is that a galaxy's time of

exposure to the gravitational field, i.e., its age, should directly influence the observed redshift. Older galaxies, having accumulated more time under spatial contraction, should exhibit a smaller redshift. This article examines this prediction, using the observed redshift difference between old (elliptical) and young (spiral) galaxies in clusters as a primary observational test for the D.U. theory."(Mar/2026)

<https://medcraveonline.com/PAIJ/PAIJ-10-00406.pdf>

'The "Decreasing Universe" model: an alternative perspective to accelerated expansion'

"The understanding of the universe's evolution has been dominated by the Standard Cosmological Model, known as Λ -CDM. This widely accepted model postulates the existence of dark matter and, crucially, dark energy to explain the observed accelerated expansion of the universe.¹ However, dark energy remains an entity of unknown and undetectable origin, presenting a significant theoretical challenge.²..."(Jun/2025)

<https://medcraveonline.com/PAIJ/PAIJ-09-00378.pdf>

(*)'Decreasing Universe: The 'Dark Matter' Effect'

"After a brief review of the Decreasing Universe (D.U.) model, we will derive a formula and the graph for the apparent velocity of stars (of a Messier_33 galaxy) as a function of their radial distance from the galactic center. This formula reproduces the same velocity curve traditionally attributed to dark matter. "(Apr/2025)

<https://www.wecmelive.com/open-access/decreasing-universe-the-dark-matter-effect.pdf>

'Decreasing Universe: The CMB and the Age of the Universe'

" We will use the "Decreasing Universe" (D.U.) theory to estimate the age of the Universe based on the average wavelength of the Cosmic Microwave Background (CMB) radiation.(May/2025)

'Decreasing Universe: Redshifts and Distance Data Refute the L-CDM Mode'

"To evaluate and compare the "Decreasing Universe theory" with the LCDM model, I created a potentially falsifiable prediction and the data was extracted and analyzed."(Mar/2025)

<https://www.wecmelive.com/open-access/decreasing-universe-redshifts-and-distance-data-refute-the-lcdm-model.pdf>

(*)'Decreasing universe: the distance as a function of redshift (new)'

"Using the "Decreasing Universe" model¹ we will show evidence that this new model of the dynamics of the Universe is less disruptive and more adequate than the traditional L-CDM model that postulates the existence of Dark Energy.

We will also develop, from this new theory, a simple and straightforward mathematical formula that provides the distance of the galaxy as a function of its redshift."(Fev/2025)

Correct: https://jocaxx.github.io/DUniverse/Todos/No_Dark_Energy.pdf

Wrong: <https://medcraveonline.com/AAOAJ/AAOAJ-09-00220.pdf>

(*)'Derivation of Hubble's Law and its relation to dark energy and dark matter'

"From the "Decreasing Universe" model^{1,2} establishing the contraction of space tissue When exposed to a gravitational field, we derive the Hubble Law and, from there, we will explain the effect "Dark Energy" ".(Mar/2019)

<https://medcraveonline.com/OAJMTP/OAJMTP-02-00049.pdf>

Derivation of Hubble's Law and the End of the Darks Elements

'From the "Decreasing Universe" model, establishing the contraction of space tissue when exposed to a gravitational field, we derive the Hubble Law and, from there, we will explain the effects "Dark Energy" and "Dark Matter".'(Apr/2019)

'The Equivalence Principle and the End of the Dark Energy'

"We will make a new approach for an effect known as "Dark Energy" by an effect on gravitational field.[1] In an accelerated rocket, the dimensions of space towards movement due to „Lorentz Contraction" are on continuous reduction. Using the equivalence principle, we presume that in the gravitational field, the same thing would happen. In this implicates in „dark energy effect". The calculi show that in a 7%-contraction for each billion years would explain our observation of galaxies in accelerated separation." (Jan/2017)

https://www.ijera.com/papers/Vol7_issue1/Part-1/C0701011314.pdf

'The Gravitational Field and the Dark Energy'

"I herein write on a new idea about cosmology that seeks to solve the dark energy and darkmatter problem by eliminating the need to postulate its existence. (Jul/2016)
